- ✓ **Removes concrete and grease**
- ✓ **Non-skin/eye irritant**
- ✓ **No personal protective gear**
- ✓ **Safe on chrome, aluminum, glass**
- ✓ **OSHA and EPA compliant**
- ✓ **100% biodegradable**

EMS is proud to offer a line of OEM tested and approved cleaners powered by the only proven safe and effective acid replacement system, Syntech.

Our patented SynTech dissolves 10% more concrete than (muriatic) acid. Still, all that potency comes with a triple-zero HMIS score. Which makes our washes safe on skin, your trucks and safe to store where you wish.

Ready Mix Truck Wash and Wax

Along with Syntech, our all-in-one truck wash contains the finest grease cutters, detergents, brighteners, natural rust inhibitors, UV deterrents, natural waxes and an anti-stick coating. A simple one-step application quickly removes grease, oil, rust, grime, dirt, diesel stains and soot and protects your substantial investment from the elements.

Barracuda 10K Concrete Stripper

If you have heavy concrete buildup, you need Barracuda. Not only is it the strongest concrete remover on the market it is also the safest. And like all EMS products it can be used anywhere on the truck. Barracuda can also be diluted down with water to take care of less severe buildup.

"I highly recommend EMS Ready Mix Truck Wash. We've noticed a decline in metal fatigue since using your product. And not having to wear PPE is a relief."

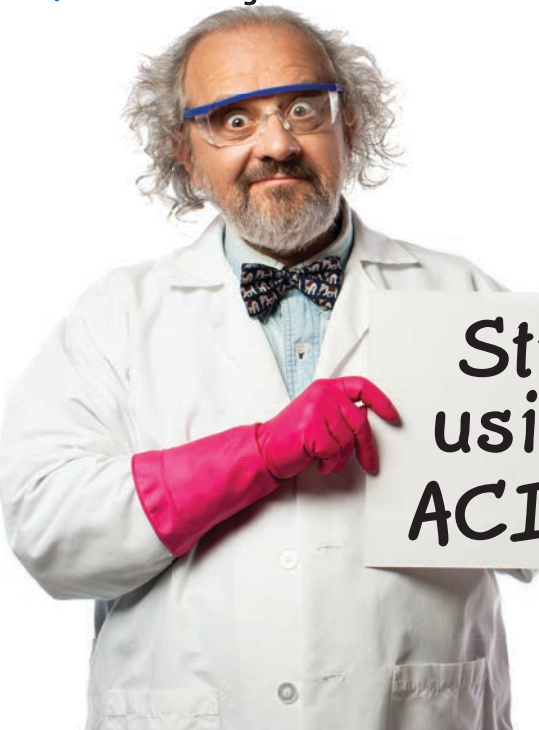

*Tim Wallschlager
Rinker Materials*

"Anyone who has used Barracuda knows how well it works. It's a far better solution than acid cleaners and entirely safe to use anywhere on the truck. There's no better concrete remover."

*Robert Heckman
Indiana Phoenix*

"We've been very impressed with Fusion. Drums, hoppers and chutes that we've treated show no sign concrete even after 10 weeks. It has eliminated the need to chip our drums."

*Dwayne McCartney
Central Supply*

Still using ACID?!

Calcium Carbonate Dissolving Power	
SynTech	9.8
Muriatic	8.4
Urea Hcl	7.2
Glycolic (sugar)	1.3
Phosphoric	0.9

Percent of calcium carbonate dissolved with 3 minute exposure. SynTech contains no urea Hcl, organic salts or traditional acids.

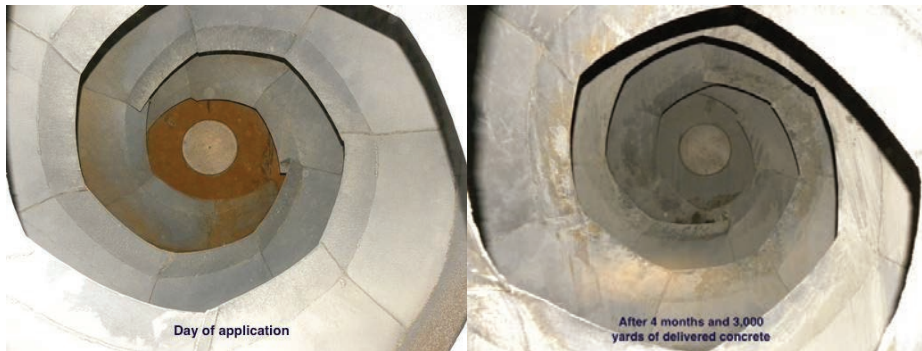

Fusion Ready Mix Drum Treatment

Fusion RM bonds with any clean, dry surface to create a barrier that is impenetrable to water and oil. This means concrete cannot stick to the internal drum walls and fins. Applications last on average 2,000 yards of delivered product.

The product is easy to apply with a simple pump up sprayer or choose the no-entry method. Several of our OEM partners will even install Fusion at the factory on new or refurbished drums.

Besides eliminating the need for chipping, instant benefits include no build up of weight to haul. And because Fusion does not allow concrete to stick to the drum, Fusion users average less than 30 gallons of water for washouts and have faster loads and pours.

Truck	Treated weight	2 weeks out	4 weeks out	7-8 Weeks Out
8344	30,180	30,200	30,360	30,560
8351	30,640	30,820	31,180	31,920
8347	29,980	30,900	30,520	31,225
8191	30,700	30,920	30,920	31,440

Brick Cleaner

Until now, the only way to remove heavy efflorescence was with harsh mineral acids. EMS Efflorescence Remover is the choice of brick and paver cleaners around the world. Our brick cleaner poses no threat to brick, stucco, windows or paint. What's more, the runoff will not hurt grass, plants, fencing or even pets.

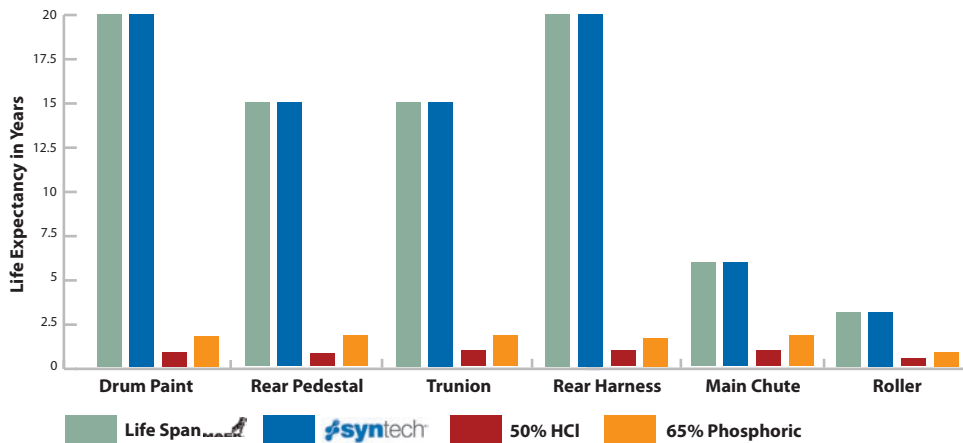

Our advanced brick cleaners are sold by industry leaders like PGH, NCA, Brock White, Oldcastle, SynPro, a.b.e. and others.

OEM Approval

Mack Truck and McNeilus did an 18-month study on the effect Syntech-powered washes had vs. the acids typical to the ready mix industry on the expected life span of dozens of their truck parts. The outcome resulted in EMS products being named specifically in the Mack warranty and why any other product voids your warranty.

Visit www.enviromfg.com to see the complete study and to learn which other leading OEMs recommend EMS washes and treatments exclusively.
