NON-REGULATED, SEMI-PERMANENT RELEASE AGENT

- 100% Solvent Free
- Non-Butyl
- 100% Readily Biodegradable
- Water Soluble
- Non-D.O.T. Regulated
- Non-Toxic
- Non-Flammable
- Lasts for several pours
- Zero VOCs
- Non-Staining

The Renovo line of products employs to most advanced developments in green technologies combined with EMS' patented acid and solvent replacements. The result are products that outperform dangerous chemicals in dozens of industries.

Renovo FR is the only release agent made from EMS' BioSyn, a renewable bio-based alternative to solvent and petrochemicals. Renovo FR is designed specifically to outperform the petroleum and vegetable oils currently used in the construction and mining industry.

Renovo FR also contains EMS' patented Fusion anti-stick ingredient. Fusion bonds with the steel to create a barrier that will not allow concrete to stick to the surface. Fusion-powered treatments for the interior of ready-mix drums provide over 2,000 yards of "stick-free" deliveries. Regular applications have eliminated drum chipping all together. Fusion has even earned the approval of several OEMs and can be applied at those factories on new or refurbished drums.

The combination of BioSyn and Fusion provide Renovo FR with semi-permanent release properties. Independent testing has shown Renovo FR to last for up to three form pours between applications. The product will wear out over time, much like the anti-stick coatings on cookware, but applications are simple and relatively inexpensive.

Renovo FR will not yellow or stain your equipment and it performs equally in any temperature.
